

FUTURING Workshop with invited experts held in Rome on the 26th of January 2017

The workshop was organized by COTEC, with the support of LMS. The workshop took place at COTEC's facilities in Palazzo Corsini - Accademia dei Lincei (COTEC location). A round table discussion with senior representatives took place. FUTURING project partners had the opportunity to collaborate in a round-table discussion with senior experts and exchange views regarding the reindustrialisation of Europe in the circular economy context. The participants sought to identify the main features of Industry 2030 as well as to define the framework and features involved in the baseline vision for EU re-industrialization in a Circular Economy according to the following aspects:

- Social
- Economical
- Environmental sustainability
- Regulatory framework and policy incentivisation

An evaluation of the importance of the identified building blocks for the future EU re-industrialization in a Circular Economy was also performed.

Finally, the workshop involved the review of two opposite scenarios (a "BRIGHT" and a "DARK"). The review concerned the evaluation of the impact of the main driver areas, with respect to their relevance and importance, on the future EU Industry in a CE framework.

Experts and stakeholders at FUTURING Rome Workshop.
